João Paulo C. C. Navarro

Full-Stack / Applied AI Engineer

São Paulo, Brazil · jp.ccn.dev@gmail.com
linkedin.com/in/jp-dev-full-stack · github.com/Razikale365

Profile

Full-stack engineer with five years shipping production software in PHP and Python, largely for the public sector, now focused on Nordic energy data. Built in public: nordic-balancing on PyPI and Nordic Balancing Watch. Also: patient regulation in production and verifiable AI answers.

Professional experience

Full-Stack Developer · DemandaNet

June 2021–present

- Built and maintained modules that let school networks import, recover, process and manage their data.
- Designed the Dynamic Virtual Warehouse module and extended the platform to school libraries and intra-municipal networks.
- Migrated legacy Oracle data to MySQL, protecting data integrity and keeping operations running.
- Built a LangChain chatbot that turns plain-language questions into SQL; delivered AWS-backed improvements.

Nordic energy · built in public

nordic-balancing: Open-source Python library for Nordic balancing and imbalance data, normalized to 15-minute UTC intervals; on PyPI (v0.4.0). github.com/Razikale365/nordic-balancing · pypi.org/project/nordic-balancing

Nordic Balancing Watch: Live site tracking when Nordic balancing data appears from each source and what is revised afterward. nordic-balancing-watch.pages.dev

entsoe-py contribution: Pull request to the ENTSO-E Transparency Platform client; submitted, under review. github.com/EnergieID/entsoe-py/pull/557

Independent product development

RegMais
Patient-regulation system that routes waiting-list patients to the right specialist appointment by specialty, priority and waiting time. In production

DispensaMais
Pharmacy system that gives each patient exactly the medication and quantity authorized, with lot-level stock accuracy. Built end to end · private repository

Fiscal Brain — personal AI study tool, used daily

- Built an AI tutor that cites its sources: async PDF ingestion (FastAPI + worker) into Qdrant and Neo4j.
- Ran it daily on my own hardware, splitting inference between local and cloud providers; evidence checked verbatim against the source.

Technical capabilities

Backend & data: Python, PHP, Laravel, FastAPI, SQLAlchemy, SQL, REST APIs, PostgreSQL, MySQL, Oracle, migrations and ETL.

Frontend: React, TypeScript, JavaScript, HTML, CSS and operational interfaces.

Delivery & applied AI: Git, AWS, testing, document ingestion and retrieval, Qdrant, Neo4j, Ollama, LangChain and natural-language-to-SQL chatbots.

Education & languages

Tecnólogo in Applied AI (IA aplicada) · PUCPR — in progress, expected completion end of 2027.

Languages: Portuguese (native), English (fluent), Swedish (A1/A2), German (beginner).
